

## HARD HAT SYSTEM

**An old friend in a new shape.  
CE-certified and  
utilizing UV-stabilized material.**

## HARD HAT SYSTEM

# An excellent hard hat, now better than ever.

The old, experienced Peltor hard hat G22C is modified and now complies with current requirements in the European standard EN 397:1995. With the objective to develop a price competitive advantage, we have created the new G22C.

This is a CE-certified hard hat manufactured in a new UV-stabilized material and with unsurpassed strength.

New G22C is developed along the same criteria as the previous one, the possibility to effectively combine a hard hat with hearing protectors, face shields and other accessories. Through evolution and long-standing experience, we have in the new price competitive G22C further developed a comfortable performer, the old classic hard hat.

### New G22C a tested and approved hard hat

Since the new G22C is a quality product, it is naturally tested and approved. This was performed in line with the new European standard EN 397:1995, and *approved to additional requirements covering side stiffness, electrical insulation and low temperature (-30°C).*

These are standardized tests where the hard hat is exposed to tough conditions.

### New material

The new G22C is manufactured in a

newly developed UV-stabilized ABS material with extreme stability and durability characteristics. In addition, the new material gives the hard hat the lowest possible weight in its class (315 gram). Due to the UV-stabilization, the material has an increased resistance to aging from exposure to sunlight.

### New G22C, still with the old features

Needless to say, we have preserved the appreciated features from the earlier G22. The superior ventilation aided by the ventilation orifices is still there. Also the head harness with the wide fabric bands, the easily replaced sweat-band, the uncomplicated adjustment to fit the head, the low placement of the neckband for increased stability and balance and last but not least the price.

In summary, the new G22C is just like the earlier hard hat, but better.

### Improved chin strap

The chin strap in the new G22C is modified to meet the requirements in EN 397:1995.

The attachment of the chin strap will now break loose at a force of 22 kg.

A safe feature if the chin strap hook on to something.

### Designed with the total picture in focus

The hard hat is, like the earlier one, designed with universality in mind.

This warrants that Peltor accessories, hearing protectors, face shields, and rain shields easily fit the hard hat while secured by clever attachments.

The various complete hard hat systems are, as earlier, still available.

#### Accessories

See separate programme:

- hearing protector
- visor
- visor seal

#### Spare parts

- sweatband
- interior fittings
- chin-strap

#### G22 variants

Size: Can be adjusted for sizes 54 - 61  
Colours: Orange, white, yellow, blue, red or green.

### World leader in hearing protection and communication in noisy environments.

Our mission is to improve job satisfaction and comfort for all people exposed to hazardous noise.

In line with this mission, we have developed a comprehensive line of hearing protection devices and communication devices that helps people work safely, comfortably and

with improved job satisfaction.

Our product development success hinges on more than 40 year's experience, in-house research and development and last but not least constructive feed-back from our customers. This strength has brought Peltor to the position as world leader in hearing

protection and communication for manufacturing and forestry industry, shooting, hunting, aviation and motor sport.

For further information about the Peltor training or hearing conservation programs or other products, please contact us directly or contact one of our distributors.
