

G3000 protective helmet

By forestry workers – For forestry workers.

Peltor G3000 – the best insurance for forestry workers

In close collaboration with professional forestry workers, Peltor has developed a helmet that meets forestry workers' stringent demands for more effective protection, better ventilation and a wider field of vision.

Peltor G3000 – the helmet with unexpected properties

INTELLIGENT VENTILATION

More ventilation holes distributed over a larger area offer maximum throughflow of air without affecting the helmet's strength.

UNIQUE DESIGN

The slim design means that falling objects slide off easily and do not dislodge the helmet from its position. The soft design without any sharp or protruding components, the extremely comfortable lining and the simple adjustment of the neck strap make the G3000 unique.

BETTER SAFETY

The helmet gets top marks for absorbing and distributing forces from falling objects. The shell is made of a specially developed UV-stabilised ABS plastic with excellent properties and a top-quality finish.

MAXIMUM FIELD OF VISION

To improve the field of vision, the helmet has been designed with a shorter screen, without compromising on anti-dazzle and other properties.

BUILT-IN CLIMBING HELMET

The helmet lining can be turned through 180 degrees – a big advantage for climbing and work in confined spaces. In addition to providing maximum visibility, this facilitates work close up to the trunk, thereby also increasing safety.

The Peltor G3000 protective helmet can be equipped with various visors, hearing protection with a helmet attachment, a chinstrap and rain protection.

Available in the colours: Yellow, white, orange and red.

Peltor G3000 – better safety

Lower transmissible force

Peltor G3000 - slim line

Slim design

Peltor G3000 – field of vision

Short screen

Peltor G3000 – ventilation

More ventilation holes distributed over a larger area

Peltor G3000 – material

- Stable shape
- Comfortable and top-quality finish

Peltor G3000 – reversible

Reversible lining for maximum visibility
